

Esri JavaScript API

Esri provide the ArcGIS Application Programming Interface (API) for JavaScript which is designed to let you to easily create 2D and 3D mapping applications. The API combines modern web technology with powerful geospatial functionality allowing you to seamlessly integrate Spatial NI services and other geospatial content to build smarter data driven visualisations.

An extensive online resource is available to assist you in building your mapping application. *Click the screenshots to open in browser.*

A good place to start is to take a look at the code samples provided.

A number of versions of the API are also available with the most recent one being 4.10. Esri provide a simple matrix which will help you to decide which version of the API you should use.
